

## Cop-R-Shield PC

Residential Flashing

Cop-R-Shield PC is a non-asphaltic copper flashing specifically designed for deck construction and termite shield protection. Advanced Building Products uses a durable 5 mil. poly laminated to either a 2 oz. or 3 oz. piece of copper. The copper and poly technology gives our flashing superior tensile strength; puncture resistance, and self-sealing capabilities.

Cop-R-Shield PC is available in 8, 10, and 12 inch widths and 20 & 60 ft. rolls

### Benefits:

- UV resistant for the life of the structure
- Used on deck applications, window sills and other openings
- Easy to form on-site
- Two layers of self-sealing protection
- Compatible with all ACQ pressure treated wood
- Perma-Lam technology allows protection from corrosion

### Features:

Cop-R-Shield PC is a permanent, premium quality laminated thru-wall flashing consisting of three (3) layers of time proven waterproofing materials combined under heat and pressure into a single sheet. It is flexible and is easily formed by hand at the jobsite.

### Special Requirements:

All materials specified shall be delivered to the site in approved manufacturer's sealed containers bearing manufacturer's name and material identification.

Cop-R-Shield PC should be installed with the copper side facing the plywood sheathing and the poly facing out.

### Installation:

When installing Cop-R-Shield PC at a deck ledger location, extend the flashing a minimum of 5 inches up the exterior wall and under the weather resistant barrier. Flashing should also extend across the width of the ledger board and down the vertical face of the board prior to attaching the deck support joists and hardware.

Flashing should be installed with corrosion resistant staples or nails.
